Real Color Image at Night Color Night Vision Technology

Real Color Image at Night - Color Night Vision Technology

Increase the color information during the night. Better recognition of objects and people in darkness due to color images. This feature is particularly important during investigation and evidence collection. Better discrimination of colored objects with Color Night Vision Technology when compared to IR based night vision technology which cannot discriminate well between two dark colored objects as IR Technology can show you either Black (for dark Colors) and white (for lighter colors)
